1. Astro Starter Kit: Basics

```
npm create astro@latest -- --template basics
```

> 🧑‍🚀 **Seasoned astronaut?** Delete this file. Have fun!

1.1. 🚀 Project Structure

Inside of your Astro project, you'll see the following folders and files:

```
/
├── public/
│   └── favicon.svg
├── src
│   ├── assets
│   │   └── astro.svg
│   ├── components
│   │   └── Welcome.astro
│   ├── layouts
│   │   └── Layout.astro
│   └── pages
│       └── index.astro
└── package.json
```

To learn more about the folder structure of an Astro project, refer to our guide on project structure.

1.2. 🧑‍🎤 Commands

All commands are run from the root of the project, from a terminal:

Command	Action
`npm install`	Installs dependencies
`npm run dev`	Starts local dev server at `localhost:4321`

`npm run build`	Build your production site to `./dist/`
`npm run preview`	Preview your build locally, before deploying
`npm run astro ...`	Run CLI commands like `astro add`, `astro check`
`npm run astro -- --help`	Get help using the Astro CLI
